

The latest news on what's powering our neighborhoods

PSE Foundation donating a generator to Island Church on Bainbridge

## Preparing for disasters

In an ongoing effort to better prepare our communities in the event of a disaster, Puget Sound Energy Foundation has a \$1 million campaign to outfit vulnerable locations with high-capacity generators to be used during emergencies. The generators are given to nonprofit organizations and will support key responders in our service area, including emergency shelters and food distribution centers.

The generator for Food Lifeline will provide the energy necessary to establish a secure staging area for getting emergency food and supplies to affected areas. It will ensure that walk-in coolers and freezers remain functional saving approximately 3 million pounds of perishable food.

The Community Disaster Shelter at Bellevue Presbyterian Church will serve as a primary shelter for any families or individuals who cannot return to their home during a disaster. It can hold 200 people for 30 days providing them two meals a day.

# Your energy, your way

The energy you buy each month is yours. So why not manage it your way? It's easy with a myPSE account.

- Outage notifications. Stay informed by receiving proactive email or text notices when the power goes out.
- Energy insights. Learn about the energy you use, the impact weather plays and get insights needed for creating a plan to save on your bill.
- Payment options. Set your preferences for payment and bill handling to match your needs.

Get started at [pse.com/mypse](http://pse.com/mypse).

## Be safe and save energy: Set water heater to 120 degrees

Washington state law recommends that residential water heaters be set no higher than 120 degrees Fahrenheit, or on the low setting. This will prevent scalding accidents and save energy.
