Take an electric car for a spin

Join us at Capital Mall in Olympia on Saturday, Sept. 14 from 10 a.m. – 3 p.m. as we celebrate National Drive Electric Week with a free public ride and drive event at the mall! Our ride and drive event is a unique opportunity to test drive the latest electric cars on the market, without the pressure of visiting a car dealer. Plus, we'll have EV experts and community partners on-site to answer questions about driving, charging and owning an electric car.

Do you need another reason to drive electric? Electric cars can now save you even more money thanks to a Washington state tax incentive, which was reinstated Aug. 1, 2019. Drivers can now save up to \$2,500 upfront on the lease or purchase of a new electric car under \$45,000 or used electric car under \$30,000.

Visit pse.com/testdrive for more information about upcoming ride and drive events.

*Test drivers must be at least 21 years old and show a valid driver's license and insurance. Test drives are assigned on a first-come, first-served basis.

Don't dig into danger—call 811 before digging

Beneath that lovely lawn of yours may rest a variety of buried utilities. Cable TV, water, natural gas and electric lines could all be present. Digging into gas or electric lines could lead to severe injury. So don't take a chance. Call 811 two business days (not counting the day you call) before you dig. Outline your dig area in white paint so that the utilities will know where to mark. Utility-owned lines are marked for free.

Be safe and save energy: Set water heater to 120 degrees

Washington state law recommends that residential water heaters be set no higher than 120 degrees Fahrenheit, or on the low setting. This will prevent scalding accidents and save energy.
