Improving electric system reliability

October 5, 2009

Puget Sound Energy to install fiber-optic line in Ebey Slough valley

Dear Resident or Business Owner,

Puget Sound Energy is working to upgrade our electric system in your neighborhood to meet our customers' current and future needs. We have received all the necessary permits to install a new fiber-optic line beginning the week of October 12 in our existing utility corridor that runs across the Ebey Slough valley north of Fobes Road to Homes Acres Road.

A fiber-optic line helps PSE remotely monitor and coordinate our electric transmission system through instantaneous communication, which improves the reliability of our electric system. The fiber-optic line will only be used by PSE and the Bonneville Power Administration for coordination of the regional electric system. PSE will not sell or lease the fiber-optic line for telecommunications or broadband cable.

The work to string the three-quarter inch diameter, fiber-optic line will take place **Mondays through Fridays between 7 a.m. and 7 p.m.** When needed, signs and flaggers will help direct traffic.

The work should not cause disruption to your electric service.

If you have any questions or concerns, please contact me at the number or e-mail address below (or toll-free at 1-888-225-5773, dial 8, and then dial extension 81-2647). For more information about this Ebey Slough fiber-optic project, please visit the Community pages on PSE.com.

Sincerely,

Leann Kostek
Sr. Project Manager
Puget Sound Energy
