Builder/owner/developer responsibilities

PSE requires the following conditions to make the worksite construction ready ahead of scheduled service:

Permits
- Electrical permit must be approved and the Department of Labor & Industries (L&I) sticker must be affixed on the electric meter base. (Do not paint over)

Trench work
- The worksite must be prepared to PSE specifications.
  » The site must be at final grade or have final grade marked in the area of construction and trench line route.
  » For unique site preparation requirements, contact your Project Manager.
  » Installation of trench, work pits, sand for bedding and shading, and conduit must meet PSE specifications.
  » Conduit for electric service lines shall be used under all paved surfaces, decks, rockeries, bulkheads, or obstacles to access the service line including back yards.

Gas service other than PSE
- If gas service will not be provided by PSE, please consult with the other utility for any additional clearance requirements. If any clearances conflict with PSE’s electric service clearances, use the greater of the conflicting distances.

Customer provided materials
- Builder/developer must provide:
  » Conduit
  » 3/8” minimum diameter pull rope
  » Backfill
  » Shading

Meter location
- An acceptable meter location that allows for required access and clearance shall be provided.
  » Acceptable electric meter locations include the front wall of the building facing typical public access, or the front 1/3 of the side wall.
  » PSE electric meters require 18 inches of maintenance clearance on either side of the electric meter and 36 inches in front of the meter.

Become familiar with what can delay your project and cause it to be red-tagged:

- Construction debris or water in the trench or work pits.
- Trenches excavated to the incorrect depth.
- Failure to maintain minimum separations between utilities and drainage pipes.
- Sand and backfill material are not available, inaccessible, or inadequate.
- Meter location is not acceptable or fails to meet minimum clearances.
- Permits are not approved or visible.
- Conduit color and size are incorrect, or conduit is installed improperly.
- No pull rope in the conduit.
**Electric underground service installation requirements**

**Meter locations and clearances**

Meters must be located where they can be easily identified and accessed by PSE. Meters may be located on the front wall of the house relative to the driveway, or on the front third of either side wall relative to the driveway (see diagram above). Meters shall not be located outside the shaded area in the diagram above.

**Electric meter base wiring and service conduit placement**

⚠️ **CAUTION**

PSE’s service conduit must not enter the center of the meter base.
Electric underground service installation requirements

Meter and service connections work pit

Work pit legend

1. Electric Meter Base – Customer Provided, and secured to stud or structural member.
2. 3/8" Pull Rope
8. Finish Grade – Finish grade shall be clearly marked.
9. Work Pit – See work pit dimensions detail on this page.
10. A minimum 1/2 Yard Bedding and Shading Sand – Sand shall be provided on-site by the customer and placed within hand-shoveling distance to the work pit for bedding and shading of direct-buried facilities. A larger work pit may require more sand (see backfill requirements on Page 4). Sand shall be washed, clean, and free of debris or rocks larger than 1/4". For discontinuous installations only.

Discontinuous and continuous conduit options

Detailed information on choosing between continuous or discontinuous conduit options can be found in Chapter 2 of PSE’s Single-Family Residential Handbook.
Electric underground service installation requirements

Trenching for electric service lines in conduit and direct-buried installations

![Diagram](image)

*Check with local permitting agency for depth of cover requirements for any PSE facility installed in public right-of-way. 36” cover may be required over PSE facilities.

Backfill requirements for direct-buried installations

- **Sand bedding:** The customer shall provide and install clean sand to a minimum depth of 3” prior to electric service cable installation.
- **Sand shading:** The customer shall provide additional clean sand in piles that are readily accessible near the trench. This shading sand is to be installed by the PSE crew after direct-buried electric installation. Enough sand shall be provided so that the installation can be covered to a depth of 3”.
- **Final backfill for direct bury:** The backfill layer above the sand shading shall be soil that is free from rocks larger than 8” in diameter, construction debris, glass, sharp rocks, and frozen clods. The standard shading depth shall be per the trench figures shown above.
- **Customer-owned facilities included in the trench:** Please contact PSE directly for clearance requirements.

Conduit requirements for electric service

- **PSE recommends the use of conduit for all electric service installations.**
  - Conduit will be required where the service line could become obstructed and difficult to access, inhibiting direct access to the service line cable for maintenance, repair, or replacement purposes.
- **PSE will install underground electric service lines in customer provided conduit that runs from the meter riser to the property line power stub.** Customer-provided conduit may be continuous or discontinuous. Detailed information on choosing between continuous or discontinuous conduit options can be found in Chapter 2 of PSE’s Single-Family Residential Handbook.
- **Electric meter base and conduit service riser installation requirements**
  - The electric meter base shall be secured to a stud or structural member.
  - The electric service riser shall be fastened securely to a structural wall using a minimum of two conduit straps.
  - Reducer couplings shall not be used at the meter base.
  - The sum total of the degrees of bends in the electric conduit run (including the bend required at the bottom of the meter base riser) shall not exceed 180°.
  - The customer assumes responsibility for damage caused by water entering a customer’s meter base or equipment.

Electric underground service installation requirements

Property line/intersection point work pit

- 3/8" Pull Rope
- Electric Service Conduit – Customer Provided. See Conduit Requirements in this handout.
- 3/4 Yard Bedding and Shading Sand – Sand shall be provided on-site by the customer and placed within hand-shoveling distance to the work pit for bedding and shading of direct-buried facilities. A larger work pit may require more sand (see backfill requirements in this handout). Sand shall be washed, clean, and free of debris or rocks larger than 1/4".
- Gas Service and Conduit – For PSE gas service and conduit, see Conduit Requirements in Gas Meter Clearances and Service Installation Requirements (form 3885).
- Electric Stub Marker – Utility Provided. Power stub shall be exposed on day of service connection.
- Gas Stub Marker – Utility Provided. For a PSE gas stub marker, see Property Line Work Pit and Service Connections in Gas and Electric Underground Service Installation Requirements (form 3061).
- CATV/TEL Marker

WORK PIT DIMENSIONS
ELECTRIC AND JOINT UTILITY

- 48" MIN
- 12" MIN POWER
- 12" MIN TV & TEL
- 12" MIN GAS

When the electric service trench terminates at a utility pole:

1. Padmount Transformer
2. Stubout

If possible, the trench should end on the quadrant of the pole that is most protected from vehicular traffic.

If you have questions regarding the location or intercept requirements for your electric service, contact Customer Construction Services or your Project Manager.

Effective: 06/01/19
Canceling: 03/01/17
Page 5 of 6
Temporary electric service requirements

Items owned and installed by customer
1. 4’ x 4’ x 10’ continuous single structure
2. 2’ x 4’ bracing (post should be braced from two directions)
3. Meter socket and distribution panel (up to 200 A, 120/240 V)
4. Ground wire, according to the NEC
5. Ground rod(s), according to the NEC
6. Service entrance conductors in accordance with NEC

Items owned and installed by PSE
7. Transformer, handhole, pedestal, or stubout
8. Meter

NOTE: Trench and backfill from meter base to transformer, handhole, pedestal, or stubout is customer provided.

NOTE: 4’x4’ work pit required to allow working room for the tools necessary to connect temporary service.
