

The latest news on what's powering our neighborhoods

## Smart savings. Smart comfort.

Wi-Fi enabled smart thermostats can make your home more energy efficient, allowing you to conveniently monitor and adjust your heating and cooling. With PSE's rebate, upgrading is easy and affordable. You could save up to \$75 on a qualifying smart thermostat purchase and income-qualified customers could save up to \$175.

Purchase wherever sold and apply for our rebate afterwards or buy from the PSE Marketplace to get your discount instantly at checkout!

## Record sockeye return marks conservation milestone

Last year, Puget Sound Energy, tribal partners, and state officials celebrated a historic achievement: nearly 92,000 sockeye salmon returned to spawn in the Skagit River system in 2025. This marks a dramatic recovery from just 99 fish in the mid-1980s, thanks to a 21-year collaborative effort involving fish passage improvements, hatchery expansion, and habitat restoration. We're proud to be part of this conservation legacy that will benefit future generations.

## We maintain our pipelines; you maintain yours

Some buried natural gas lines—like those for pools, hot tubs, barbecues or detached buildings—belong to you. We take care of the pipeline up to your gas meter, but anything beyond that is your responsibility. If those lines aren't maintained, they can corrode or leak. The safest option? Have a licensed plumbing contractor check them and make any repairs.
