THE VOICE OF myPSE

PUGET SOUND ENERGY

The latest news on what's powering our neighborhoods

Storm season is here. Are you prepared?

PSE wants to help you and your family stay safe and ready for severe weather. Taking a few simple steps now can make a big difference when a storm hits.

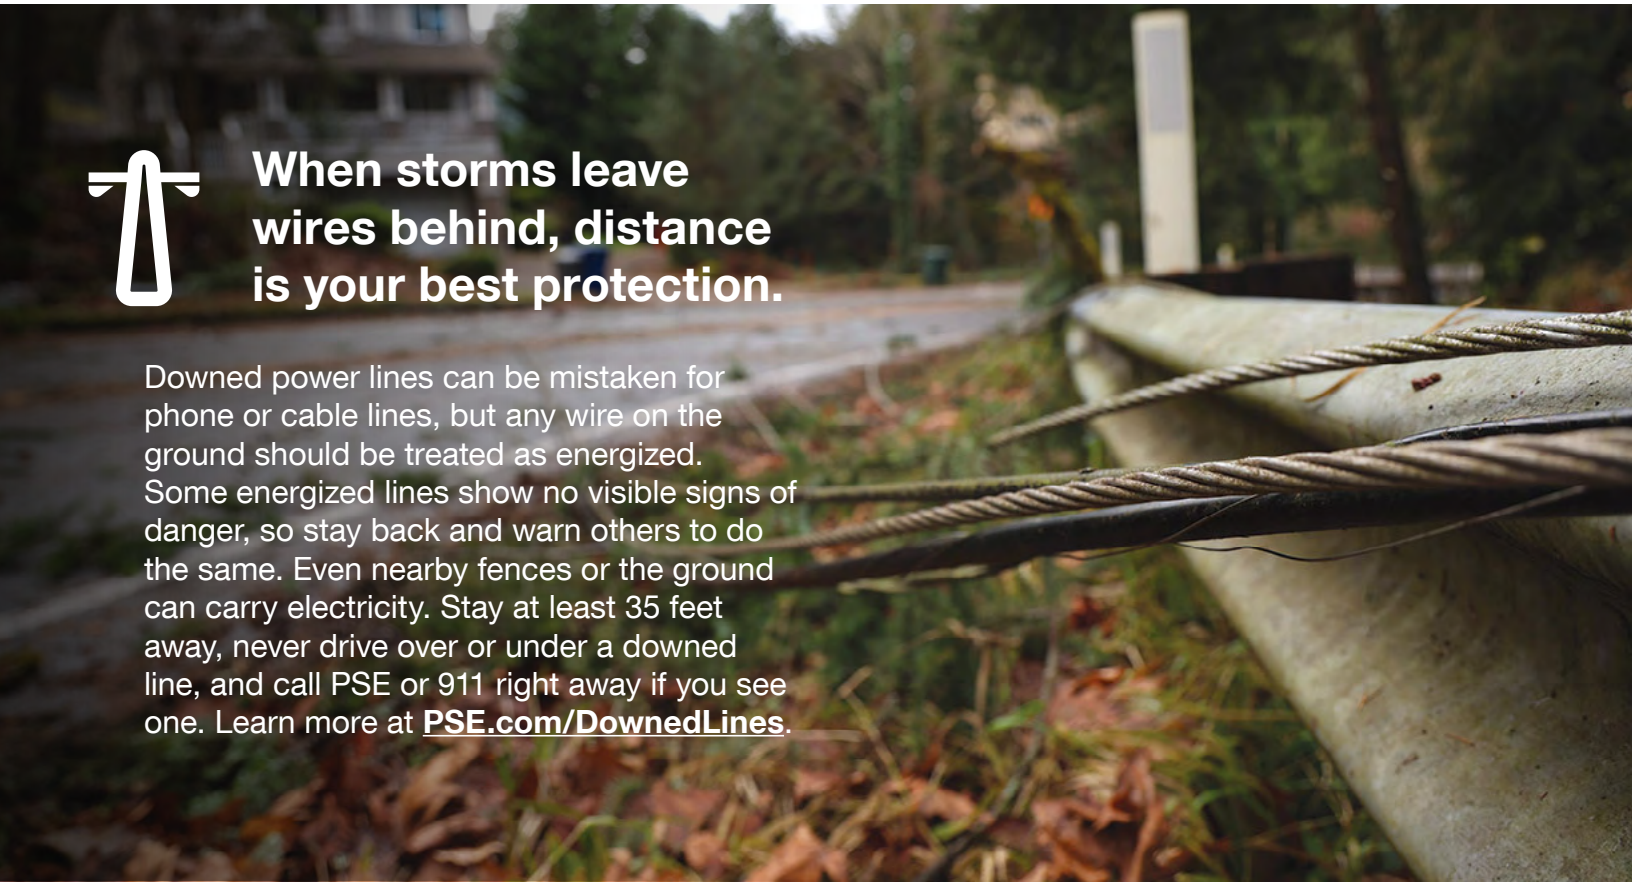

Get prepared with these three steps:

1. **Build an emergency kit**
   Include enough food, water, medications, flashlights, batteries, and pet supplies to last at least three days.
2. **Create a family emergency plan**
   Talk with your household about how you'll communicate and where you'll meet if a storm or other emergency occurs
3. **Download the myPSE app**
   The fastest way to report and track power outages, receive updates, and stay informed during storm season.

For more safety tips and preparedness resources, visit PSE.com/Storm.

Power Up: Clean Energy and You

Power Up: Clean Energy and You is coming to Seattle's Museum of History & Industry (MOHAI) from the end of October 2026 through January 2027! Explore interactive experiences co-created with community members that bring Washington's clean energy transition to life. Discover technologies and everyday choices that can help you save energy and support a cleaner energy future. Visit mohai.org/powerup for a special discount on exhibit tickets.

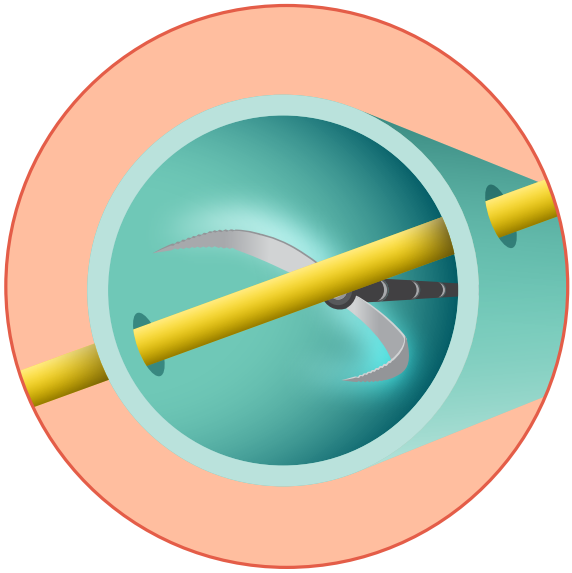

When storms leave wires behind, distance is your best protection.

Downed power lines can be mistaken for phone or cable lines, but any wire on the ground should be treated as energized. Some energized lines show no visible signs of danger, so stay back and warn others to do the same. Even nearby fences or the ground can carry electricity. Stay at least 35 feet away, never drive over or under a downed line, and call PSE or 911 right away if you see one. Learn more at **PSE.com/DownedLines**.

Not sure what's causing that sewer blockage? PSE can help make sure it's safe to clear.

If your sewer or septic line is blocked beyond your home's walls, call PSE before your plumber grabs a cutting tool. In rare cases, natural gas lines have been unintentionally installed through sewer lines, and cutting into one could cause a serious gas leak. PSE will meet your plumber on site for free to make sure it's safe to clear. Learn more at PSE.com/SewerSafety.

Copies of information on rules, rates, power supply fuel mix, regulations, customer rights and responsibilities, as well as an annual report, are available by calling 1-888-225-5773 and at PSE.com.
