Carbon monoxide detection saves lives

Carbon monoxide is a silent, odorless gas that can be deadly if undetected. Installing a carbon monoxide detector is essential for protecting your household from potential poisoning. Regularly testing the device ensures it functions properly and provides early warning in case of a leak. For maximum safety, place detectors near sleeping areas and check batteries monthly. Prevention starts with awareness and reliable detection.

Upgrade to a heat pump water heater and save

Switching to an energy-efficient heat pump water heater can help lower your monthly energy bills while offering reliability that's just as good, if not better, than traditional systems. If you use PSE electricity, you could save \$750 on a new heat pump water heater with PSE's rebate. Income-eligible customers can save up to \$850!

Visit [PSE.com/HPWH](https://www.pse.com/HPWH) for full rebate details and a list of qualified models.

How we keep our system safe

Pipeline safety is a top priority at Puget Sound Energy. As Washington's largest natural gas utility, we inspect nearly 26,000 miles of pipeline regularly and monitor the system around the clock. Our technicians and service partner, Hydromax USA, perform regular leak surveys and equipment checks to ensure safety. You can help too—always call 811 before digging.
