**Re: Annual Renewable Portfolio Standard Report - 2025
RCW-Required Report, RCW 19.285.070 and
WAC-Required Report, WAC 480-109-210**

Dear Executive Director Killip:

Attached for filing, please find Puget Sound Energy's (PSE's) report detailing the annual reporting requirements for the Renewable Portfolio Standard Report (Report) in RCW 19.285.070 and WAC 480-109-210. PSE is asking the Commission to approve its 2025 Renewable Energy Target of 3,174,553 MWh.

PSE requests confidential treatment for Attachments 4, 9, and 11 to the Report under RCW 80.04.095 and in accordance with WAC 480-07-160. The information labeled as confidential includes commercially sensitive data such as counter-party and confidential information related to renewable energy credit (EC sales revenues and prices, which could expose PSE and its counter-parties to competitive injury if disclosure is unrestricted. Therefore, PSE requests confidential treatment and has labeled such information as "Shaded Information is Designated as Confidential per WAC 480-07-160" as provided in RCW 80.04.095 and in accordance with WAC 480-07-160(2)(c).

The Confidential information is redacted as follows:

Location	Type of Information	Explanation
Attachment 4 First tab: Tables w Facility (C)	REC revenues	This tab contains REC revenue information.
Attachment 4 Second tab: By Period By Vintage (C)	REC revenues	This tab contains REC revenue information.

Location	Type of Information	Explanation
Attachment 4 Fourth tab: Revenue Detail (C)	REC revenues REC prices	This tab contains REC revenue detail by transaction and by resource or agreement.
Attachment 8 REC Contracts for First Time Facilities	REC prices Counterparties	This attachment includes REC and power prices and counterparty information.
Attachment 10 REC Transfers for First Time Facilities	Counterparties	This attachment includes REC purchase counterparty information.

As detailed in PSE's report, PSE is requesting approval that the RECs from Simcoe Solar, LLC and Orchard Ranch Solar, LLC, that are being utilized by PSE for the first time are eligible for Renewable Portfolio Standard (RPS) compliance. PSE has provided justification and documentation of the eligibility of these facilities in the Report and its Attachments 8 through 10.

Also in Docket UE-240411, PSE requested the Commission consider and approve Sierra Pacific Burlington Onsite Load and Mt. Home Solar 1, LLC eligible renewable resources for RPS compliance. To date, PSE has not received confirmation that the request was reviewed or addressed. As such, PSE respectfully requests as part of this year's submission to ensure the necessary approvals are obtained. These facilities will be used for PSE's 2023 close out report and the same request will be made in that report.

A copy of this report will also be submitted to the Department of Commerce.

If you have any questions about the information contained in this filing, please contact Linh Pham at Linh.Pham@pse.com. If you have any other questions please contact me at (425) 456-2105.

Sincerely,

/s/ Susan Free

Section 1. Annual Load for the Prior Two Years

This section provides the delivered load from the prior two calendar years that is the source for the 2025 target calculation in Section 2.

	<u>2023</u>	<u>2024</u>
Delivered Load to Retail Customers (MWh)	21,165,762	21,161,605

The source of this data is the PSE's 2024 FERC Form 1, p. 301, line 10, columns d and e.

Section 2. 2025 Renewable Energy Target

This section provides the number of megawatt-hours from eligible renewable resources and/or renewable resource credits the utility needed to meet its annual renewable energy target by January 1st of the target year.

Subject to Commission approval, PSE's Renewable Energy Target for 2025 will be 3,174,553 MWh.

Calculation:

	<u>2023</u>	<u>2024</u>
Delivered Load to Retail Customers (MWh)	21,165,762	21,161,605
Average Load	21,163,684	
15 Percent of Average Load	3,174,553	

Section 3. Renewable Energy Acquired To Meet 2025 Renewable Energy Target

This section provides the amount (in megawatt-hours) of each type of eligible renewable energy credits planned to be acquired to meet the 2025 target.

As was previously documented as shown in Attachment 1, PSE has sufficient eligible renewable resources to meet its 2025 target. PSE plans to meet its 2025 target with a combination of incremental hydro along with other RECs from qualifying resources. The following table, which is supported in the "Generation Rollup" tab of Attachment 3, shows RECs from all of PSE's eligible resources for 2025, a subset of which will be used for compliance purposes:

Incremental Hydro Resources	113,354
Eligible Wind Resources	6,884,099
Biomass	139,379
Total	7,136,832

Section 4. Incremental Cost Calculation and Revenue Requirement Ratio

This section calculates the total incremental cost as a dollar amount and in dollars per megawatt-hour of renewable energy generated by all eligible renewable resources and multiplies the dollars per megawatt-hour cost by the number of megawatt-hours needed for target year compliance and provides the annual revenue requirement ratio.

The following is a summary of PSE’s incremental cost calculation as developed in Staff’s template, attached as Attachment 5.

Description	All Eligible Resources (RCW 19.285.070(1))	Resources Used for Target Year (WAC 480-109-210(2)(a)(ii)(B) and (C))
Incremental Cost ¹	\$45.4 million	\$25.6 million
Revenue Requirement	\$3,229.3 million	\$3,229.3 million
Percentage	1.407%	0.793%
Source of Information	Attachment 5 “(2)(a)(ii)Annual2025est” tab	Attachment 5 “(2)(a)(ii)Annual2025est” tab

PSE’s incremental cost is based on the average cost of eligible renewable resources. Consistent with the requirements outlined in WAC 480-109-210 (2)(a)(i) (A) through (G), the calculation of incremental costs for each eligible resource is performed at the time of acquisition. PSE’s most recently filed Electric IRP was filed on April 1, 2021 in Docket UE-200304. PSE’s Petition for a Five Year Exemption from WAC 480-109-210(2)(a)(i)(B) and (E) in Docket UE-240278 was granted on May 23, 2024 “in order [for PSE] to use the most recently filed electric Integrated Resource Plan or the most recent Integrated Resource Plan Progress Report for the basis of determining eligible and ineligible leveled capacity costs.” While PSE filed its Electric Progress Report on March 31, 2023 in Docket UE-200304, it does not include information regarding capacity value or eligible and ineligible leveled capacity costs. Based on PSE’s 2021 IRP in Docket UE-200304, the one-time incremental costs (in millions of dollars) at the time of acquisition along with the annual megawatt hour (MWh) assumed for each eligible resource are as follows:

¹ See Attachment 5, tab “(2)(a)(ii)Annual2025est”. Amounts are net of anticipated proceeds from the sales of RECs during the target year. PSE does not anticipate having any REC sales in 2025. RECs related to specified source sales into California are included in the sales section of Attachment 3 and are assigned a \$0 value.

(\$ Millions/Year)	Renewable Resource	Equivalent Non-Renewable			One Year Incremental Cost	Annual MWh	Market Price/Peaker Assumptions
		Peaker	Market	Total			
Hopkins Ridge	\$18.77	\$1.71	\$19.26	\$20.97	(\$2.20)	466,908	2004 RFP
Wild Horse	\$34.94	\$3.21	\$26.53	\$29.74	\$5.20	642,984	2006 RFP
Klondike III	\$10.27	\$0.93	\$8.98	\$9.91	\$0.36	157,680	2006 RFP
Hopkins Infill	\$1.28	\$0.17	\$1.19	\$1.36	(\$0.08)	21,024	2007 IRP
Wild Horse Expansion	\$10.03	\$0.81	\$5.09	\$5.90	\$4.13	91,980	2007 IRP
Lower Snake River I	\$70.61	\$1.69	\$48.51	\$50.20	\$20.41	897,900	2010 Trends
Snoqualmie Falls Upgrade	\$3.85	\$0.74	\$2.44	\$3.18	\$0.67	34,164	2009 Trends
Lower Baker 4	\$8.60	\$1.37	\$7.92	\$9.29	(\$0.69)	109,500	2011 IRP Base
SPI PPA	\$6.77	\$1.41	\$3.37	\$4.78	\$1.99	126,582	2019 IRP Process Mid
Golden Hills	\$32.57	\$10.52	\$17.36	\$27.88	\$4.69	682,692	2019 IRP Process Mid
Clearwater	\$58.95	\$13.79	\$36.47	\$50.26	\$8.69	1,419,558	2020 RFP
Total	\$256.64	\$36.35	\$177.12	\$213.47	\$43.17	4,650,972	

As reflected in the above table, the incremental cost of all eligible renewable resources portfolio is \$43.17 million² resulting in an average cost/MWh of \$8.93.³ Based on anticipated REC utilization for the 2025 target year, the incremental cost for the portfolio of resources is \$24.32 million⁴ (\$7.66/MWh x 3,174,553 MWh).⁵

The resulting ratios of the portfolio's annualized cost of investment, net of anticipated REC sales,⁶ relative to the utility's total annual retail revenue requirement is 1.407% for all eligible resources and 0.793% for resources anticipated to be used for the target year.⁷

The total annual retail revenue requirement for 2025 is \$3,229.3 million. The 2025 revenue requirement is based on the revenue requirement underlying the rates approved in PSE's 2024 general rate case under Docket No. UE-240004 as filed in the January 21, 2025 compliance filing.

² This amount is not net of the anticipated REC sales.

³ Amount includes the impact of apprenticeship credits. See Attachment 5, tab "(2)(a)(iii)(A) and (B)" cell D24.

⁴ Attachment 5, tab "(2)(a)(iii)(A) and (B)" cell F24.

⁵ Attachment 5, tab "(2)(a)(iii)(A) and (B)" cells E24 and F25.

⁶ PSE is not anticipating any REC sales in 2025. RECs related to specific source sales into California are included in the sales section of Attachment 3 and are assigned a \$0 value.

⁷ Attachment 5, tab "(2)(a)(ii)Annual2025est (C)", cells D49 and G49.

Section 5. Alternative Compliance

This section states whether the utility is relying upon one of the alternative compliance mechanisms provided in WAC 480-109-220 instead of fully meeting its renewable resource target. A utility using an alternative compliance mechanism must use the incremental cost methodology described in this section and include sufficient data, documentation and other information in its report to demonstrate that it qualifies to use that alternative mechanism.

PSE is not utilizing an alternative compliance mechanism provided for in RCW 19.285.040(2)(d) or RCW 19.285.050(1) and WAC 480.109.220 instead of meeting its 2025 Renewable Energy Target.

Section 6. 2025 Compliance Plan

This section describes the resources that PSE intends to use to meet the renewable resource requirements for the target year.

PSE is positioned to meet its 2025 Renewable Energy Target with a combination of qualified hydroelectric upgrades and other renewable energy certificates from qualifying resources. The following table provides a summary of PSE's expected 2025 compliance. Further details about this information can be found in Attachment 3 and Attachment 11.

Blue = Hydro, Gray = Apprenticeship Credits Facility	Source	PSE 2025 Compliance Plan		
		2024 Vintage	2025 Vintage	2025 Plan
Baker River Project	Water	-	96,279	96,279
Clearwater	Wind	1,287,539		1,287,539
Golden Hills Wind Farm LLC	Wind	621,211		621,211
Hopkins Ridge	Wind	177,000		177,000
Hopkins Ridge Phase II	Wind			-
Klondike III	Wind	123,377		123,377
Lower Snake River - Dodge Junction	Wind	-	196,506	196,506
Lower Snake River - Dodge Junction - Apprenticeship Credits	Wind-A		39,301	39,301
Lower Snake River - Phalen Gulch	Wind	-		-
Lower Snake River - Phalen Gulch - Apprenticeship Credits	Wind-A			-
Snoqualmie Falls Project	Water	-	17,075	17,075
Sierra Pacific Burlington - Sierra Pacific Burlington	Biomass	-		-
Wild Horse	Wind	525,490		525,490
Wild Horse Phase II	Wind	-	75,646	75,646
Wild Horse Phase II - Apprenticeship Credits	Wind-A	-	15,129	15,129
Totals		2,734,617	439,936	3,174,553

Data for 2025 provided above is an estimate and is subject to change.

Section 7. Eligible Resources

This section provides a list of each eligible renewable resource that serves Washington customers, for which PSE owns the certificates, with an installed capacity greater than twenty-five kilowatts and each resource's WREGIS registration status and use of certificates, whether it be for annual target compliance, a voluntary renewable energy program as provided for in RCW 19.29A.090, or owned by the customer; and eligible resources being included in the report for the first time and documentation of their eligibility.

PSE has acquired sufficient eligible renewable resources in its portfolio to supply at least fifteen percent of its estimated load for the year 2025, in advance of January 1, 2025. Eligible renewable resources that PSE may elect to use in whole or in part to meet its 2025 target include (but are not limited to):

- Hopkins Ridge Wind Project;
- Wild Horse Wind Project;
- Wild Horse Expansion Wind Project (including extra apprenticeship credits);
- Lower Snake River Wind Project (including extra apprenticeship credits);
- Klondike III Wind Project (e.g. the output PSE purchases from Avangrid Renewables);
- Sierra Pacific Burlington
- Snoqualmie Falls Hydroelectric Efficiency Upgrades;
- Lower Baker River Hydroelectric Efficiency Upgrades;
- Golden Hills Wind Facility Power Purchase Agreement;
- Clearwater Wind Project Power Purchase Agreement;
- Allocation of Hydroelectric Efficiency Upgrades that may be (now or in the future) a part of PSE's Mid-C Contracts;
- Biomass;
- Customer-Generator owned facilities taking service from PSE under PSE electric rate Schedule 91;
- Washington RPS compliant REC purchases; and
- Any other eligible renewable resources that may become available in 2025 or 2026.

Please also see Attachment 1.

PSE has purchased RECs that it anticipates using for 2024 RPS compliance from the following two facilities for the first time. PSE respectfully requests the Commission consider and approve these two facilities as eligible renewable resources for annual RPS compliance prior to the need to retire them. In support of this request, PSE provides documentation supporting the eligibility of these first time facilities in Attachments 8 through 10. PSE has provided the REC purchase contract under which the RECs were purchased from the two facilities (see Confidential Attachment 8). Additionally, PSE has provided a WREGIS report indicating that both facilities have a Commenced Operation Date prior to January 1, 2024, the year in which these RECs are intended to be used (see Attachment 9, WREGIS Proof of Operability). Confidential Attachment 10 shows Simcoe Solar, LLC and Orchard Ranch Solar, LLC RECs transferred to PSE.

No.	Facility	WREGIS ID	Facility Type per Att. 9	Compliant Pursuant to WAC 480-109-060
1	Simcoe Solar, LLC	W5372	Solar	(12)(a)(i) and (32)(c)
2	Orchard Ranch Solar, LLC	W5373	Solar	(12)(a)(i) and (32)(c)

PSE requests the Commission consider and approve these facilities as eligible renewable resources for RPS compliance:

1. Simcoe Solar, LLC qualifies as an eligible renewable solar energy facility under WAC 480-109-060(12)(a)(i) and WAC 480-109-060(32)(c) and has been assigned WREGIS ID W5372 and commenced operation on January 30, 2017. The proof of operability for this facility is evidenced by the Commercial Operation Date provided in Attachment 9. These RECs are intended to be used for 2024 or future RPS compliance.

2. Orchard Ranch Solar, LLC qualifies as an eligible renewable solar energy facility under WAC 480-109-060(12)(a)(i) and WAC 480-109-060(32)(c) and has been assigned WREGIS ID W5373 and commenced operation on February 2, 2017. The proof of operability for this facility is evidenced by the Commercial Operation Date provided in Attachment 9. These RECs are intended to be used for 2024 or future RPS compliance.

Also in Docket UE-240411, PSE requested the Commission consider and approve these facilities as eligible renewable resources for RPS compliance:

No.	Facility	WREGIS ID	Facility Type per Att. 9	Compliant Pursuant to WAC 480-109-060
1	Sierra Pacific Burlington Onsite Load	W2042	Biomass	(12)(a)(i) and (32)(j)
2	Mt. Home Solar I LLC	W5616	Solar	(12)(a)(i) and (32)(c)

To date, PSE has not received confirmation that the request was reviewed or addressed. As such, PSE respectfully requests as part of this year's submission to ensure the necessary approvals are obtained. These facilities will be used for PSE's 2023 close out report and the same request will be made in that filing.

Section 8. Sales

This section reports on the number of certificates sold, their WREGIS certificate numbers, their source, and the revenues obtained from the sales.

The following table summarizes PSE's REC sales volumes by source and vintage year for 2021 through 2024 vintages as reported in Attachment 3.

Sum of Qty	Vintage Year					
Facility	WREGIS #	2021 Vintage	2022 Vintage	2023 Vintage	2024 Vintage	Grand Total
Hopkins Ridge Phase II	W1382	7,200				7,200
Lower Snake River-Dodge Junction	W2669	15,500	15,500	15,500		46,500
Wild Horse	W183			14,313	10,299	24,612
Clearwater	W14351			20,622	16,837	37,459
Grand Total		22,700	15,500	50,435	27,136	115,771

Confidential Attachment 4 provides transaction details including the confidential revenue proceeds associated with the above sales.

MEMORANDUM

TO: Jon Piliaris and Phil Haines

FROM: Chris Schaefer and Brian Tyson

DATE: December 30, 2024

SUBJECT: Eligible Renewable Resources for Renewable Portfolio Standard for Target year 2025 pursuant under WAC 480-109-200

Background

Chapter 480-109 of Washington Administrative Code (WAC) establishes rules that electric utilities must follow to comply with the requirements of the Energy Independence Act (Chapter 19.285 RCW). Specifically, the following provisions within WAC 480-109-200 Renewable portfolio standard states:

- (1) Renewable resource target.** Each utility must meet the following annual targets.
 - a. By January 1st of each year beginning in 2020 and continuing each year thereafter, each utility must use sufficient eligible renewable resources, acquire equivalent renewable energy credits, or a combination of both, to supply at least fifteen percent of its two-year average load for the remainder of each target year.
- (2) Credit eligibility.** A qualifying utility may use renewable energy credits to meet the provisions of this section, provided the renewable energy credits meet the following requirements:
 - a. A renewable energy credit from electricity generated by a resource other than freshwater may be used to meet a requirement applicable to the year in which the credit was created, the year before the year in which the credit was created, or the year after the year in which the credit was created;
 - b. A renewable energy credit from electricity generated by freshwater:
 - i. May only be used to meet a requirement applicable to the year in which the credit was created; and
 - ii. Must be acquired by the qualifying utility through ownership of the generation facility or through a transaction that conveyed both the electricity and the nonpower attributes of the electricity.
 - c. A renewable energy credit transferred to an investor-owned utility pursuant to the Bonneville Power Administration's residential exchange program may not be used by any utility other than the utility receiving the credit from the Bonneville Power Administration;

- d. Each renewable energy credit may only be used once to meet the requirements of this section and must be retired using procedures of the renewable energy credit tracking system; and
- e. For purposes of this subsection, the vintage month and vintage year of the renewable energy credit represent the date the associated unit of power was generated.

(3) WREGIS registration. All eligible renewable resources used for utility compliance with the renewable resource target must be registered in WREGIS, regardless of facility ownership. Any renewable energy credit that a utility uses for compliance must have a corresponding certificate retired in the utility's WREGIS account.

(5) Target calculation. In meeting the annual targets of this section, a utility must calculate its annual target based on the average of the utility's load for the previous two years.

(6) Integration services. A renewable resource within the Pacific Northwest may receive integration, shaping, storage or other services from sources outside of the Pacific Northwest and remain eligible to count towards a utility's renewable resource target.

(10) Alternative compliance when renewable and nonemitting electric generation used to meet one hundred percent of annual retail electric load. Pursuant to RCW 19.285.040 (2)(m), beginning January 1, 2030, a qualifying utility is considered to be in compliance with an annual renewable energy target in RCW 19.285.040 (2)(a) if the utility meets one hundred percent of the utility's average annual retail electric load using any combination of electricity from:

- a. Renewable resources and renewable energy credits as defined in RCW 19.285.030; and
- b. Nonemitting electric generation, as defined in WAC 480-109-060(23). Nothing in subsection (10) of this section relieves the requirements of a qualifying utility to comply with the conservation targets established under RCW 19.285.040(1).

Summary

Pursuant to the requirements of WAC 480-109-200 Renewable portfolio standard, we have prepared this Memorandum to document that Puget Sound Energy ("PSE") has acquired sufficient eligible renewable resources in its portfolio, by January 1, 2025, to supply at least fifteen percent of its 2023-2024 average load for the 2025 target year.

The following provides details of PSE's eligible renewable resources, load and renewable energy target.

Eligible Renewable Resources

Eligible renewable resources that PSE may elect to use in whole or in part to meet its 2024 target include (but are not limited to):

- Hopkins Ridge Wind Project
- Wild Horse Wind Project
- Wild Horse Expansion Wind Project (including extra apprenticeship credits)

- Lower Snake River Wind Project (including extra apprenticeship credits)
- Klondike III Wind Project Power Purchase Agreement (“PPA”)
- Golden Hills Wind PPA
- Clearwater Wind I PPA
- Sierra Pacific Burlington Biomass PPA
- Snoqualmie Falls Hydroelectric Efficiency Upgrades
- Lower Baker River Hydroelectric Efficiency Upgrades
- Allocation of Hydroelectric Efficiency Upgrades that may be (now or in the future) a part of PSE’s Mid-C Contracts
- Biomass
- Customer-Generator owned facilities taking service from PSE under PSE electric rate Schedule 91
- WA RPS compliant REC purchases, and
- Any other eligible renewable resources that may become available.

Total 2023 generation from RPS compliant owned and contracted resources was approximately 3,819,064 megawatt-hours (not inclusive of available extra apprenticeship credits). Higher generation may be achieved for 2024 and 2025 based on resource additions.

PSE’s expected 2025 eligible renewable resource generation of 5,087,704 megawatt-hours, not including extra apprenticeship credits, plus 2024 eligible renewable resource generation banked forward, exceeds its 2025 renewable resource target of 3,172,473 megawatt-hours.

These eligible renewable resources may be impacted by events beyond PSE’s reasonable control, which could not be reasonably anticipated, that could prevent PSE from meeting the renewable energy target. Such events may include weather-related damage, mechanical failure, strikes, lockouts, or actions of a governmental authority that adversely affect the generation, transmission, or distribution of an eligible renewable resource owned by or under contract to PSE.

PSE does not currently intend to utilize one of the alternative compliance mechanisms provided for in RCW 19.285.040(2)(d) or RCW 19.285.050(1) and WAC 480-109-220 for meeting its 2025 renewable resource target. However, there may be events beyond PSE’s control during calendar year 2025, which could prompt PSE to utilize one of the above-mentioned alternative compliance mechanisms. Such a determination will be made when PSE reports on its final 2024 compliance in the final compliance report due in 2026. PSE may choose to purchase eligible RECs to meet annual compliance targets and use PSE-owned resources for other higher-value purposes.

Load

As defined in the rule, “Load” means the amount of kilowatt-hours of electricity delivered in the most recently completed year by a qualifying utility to its Washington retail customers. Load does not include off-system sales or electricity delivered to transmission-only customers. PSE’s actual 2023 delivered load was 21,165,762,000 kilowatt-hours (21,165,762 megawatt- hours) and the 2024 forecast load is 21,133,873,000 kilowatt-hours (21,133,873 megawatt- hours). This forecast does not include Microsoft load served under the Special Contract in Docket UE-161123, and other source types excluded from the load forecast.

Consistent with WAC 480-109-210(2), based on the average of PSE's load in 2023 and 2024 and as reflected above, PSE's anticipates the load that will be required to be met for purposes of its 2025 target is 21,149,818 megawatt-hours.

2025 Renewable Resource Target

Pursuant to WAC 480-109-200(1)(c), PSE's renewable resource target shall be fifteen percent of its 2023-2024 average load. Therefore, PSE's estimated renewable energy target for 2025 is approximately 3,172,473 megawatt-hours (fifteen percent of 21,149,818 megawatt-hours.) PSE expects that eligible renewable energy generation in 2025, combined with surplus RECs generated in 2024, will be in excess of its 2025 requirement.

PSE will report on the specific renewable energy credits produced and to be retired for final compliance with the 2025 target in PSE's 2027 compliance report, and reserves the right to submit renewable energy credits from the resources reported here or to substitute with renewable energy credits produced from 2024 to 2026 by other eligible renewable resources or with 2025 generation from eligible renewable resources that have not been converted to renewable energy credits.

Conclusion

PSE has acquired sufficient eligible renewable resources or renewable energy credits to meet the estimated renewable energy target for 2025.

In sum, PSE's expected 2025 eligible renewable resource generation, not including extra apprenticeship credits, plus 2024 eligible renewable resource generation banked forward, exceeds its 2025 renewable resource target.

Electric Analysis Models

INCREMENTAL COSTS OF RENEWABLE RESOURCES G-61

- *Analytic Framework*
- *Equivalent Non-Renewable*
- *Summary Results*

3. Incremental Costs of Renewable Resources

According to RCW 19.285, certain electric utilities in Washington must meet 15 percent of their retail electric load with eligible renewable resources by the calendar year 2020. The annual target for the calendar year 2012 was 3 percent of retail electric load, and for 2016, it was 9 percent. However, if the incremental cost of those renewable resources compared to an equivalent non-renewable is greater than 4 percent of its revenue requirement, then a utility will be considered in compliance with the annual renewable energy target in RCW 19.285. The law states it this way: “The incremental cost of an eligible renewable resource is calculated as the difference between the levelized delivered cost of the eligible renewable resource, regardless of ownership, compared to the levelized delivered cost of an equivalent amount of reasonably available substitute resources that do not qualify as eligible renewable resources.”

Analytic Framework

This analysis compares the revenue requirement cost of each renewable resource with the projected market value and capacity value at the time of the renewable acquisition. There may be other approaches to calculating these costs – such as using variable costs from different kinds of thermal plants instead of market. However, PSE’s approach is most reasonable because it most closely reflects how customers will experience costs; i.e., PSE would not dispatch a peaker or CCCT with the ramping up and down of a wind farm without regard to whether the unit is being economically dispatched. For example, a peaker will not be economically dispatched often at all, so capacity from the thermal plant and energy from market is the closest match to actual incremental costs – and that is the point of this provision in the law – a to ensure customers don’t pay too much. This, “contemporaneous” with the decision-making aspect of PSE’s approach, is important. Utilities should be able to assess whether they will exceed the cost cap before an acquisition, without having to worry about ex-post adjustments that could change compliance status. The analytical framework here reflects a close approximation of the portfolio analysis used by PSE in resource planning, as well as in the evaluation of bids received in response to the company’s request for proposals (RFP).

“Eligible Renewable Resources”

Figure G-36: Resources that Meet RCW 19.285 Definition of Eligible Renewable Resources

	Nameplate (MW)	Annual Energy (aMW)	Commercial Online Date	Market Price/Peaker Assumptions	Capacity Credit Assumption
Hopkins Ridge	149.4	53.3	Dec-05	2004 RFP	20%
Wild Horse	228.6	73.4	Dec-06	2006 RFP	17.20%
Klondike III	50	18	Dec-07	2006 RFP	15.60%
Hopkins Infill	7.2	2.4	Dec-07	2007 IRP	20%
Wild Horse Expansion	44	10.5	Dec-09	2007 IRP	15%
Lower Snake River I	342.7	102.5	Apr-12	2010 Trends	5%
Snoqualmie Upgrades	6.1	3.9	Mar-13	2009 Trends	95%
Lower Baker Upgrades	30	12.5	May-13	2011 IRP Base	95%
SPI Biomass PPA	17	16.2	Jan-21	2018 RFP	96%

Equivalent Non-renewable

The incremental cost of a renewable resource is defined as the difference between the levelized cost of the renewable resource compared to an equivalent non-renewable resource. An equivalent non-renewable is an energy resource that does not meet the definition of a renewable resource in RCW 19.285, but is equal to a renewable resource on an energy and capacity basis. For the purpose of this analysis, the cost of an equivalent non-renewable resource has three components:

1. **Capacity Cost:** There are two parts of capacity cost. First is the capacity in MW. This would be the nameplate for a firm resource like biomass, or the assumed capacity of a wind plant. Second is the \$/kW cost, which we assumed to be equal to the cost of a peaker.
2. **Energy Cost:** This was calculated by taking the hourly generation shape of the resource, multiplied by the market price in each hour. This is the equivalent cost of purchasing the equivalent energy on the market.
3. **Imputed Debt:** The law states the non-renewable must be an “equivalent amount,” which includes a time dimension. If PSE entered into a long-term contract for energy, there would be an element of imputed debt. Therefore, it is included in this analysis as a cost for the non-renewable equivalent.

For example, Hopkins Ridge produces 466,900 MWh annually. The equivalent non-renewable is to purchase 466,900 MWh from the Mid-C market and then build a 30 MW ($149.4 \times 20 \text{ percent} = 30$) peaker plant for capacity only. With the example, the cost comparison includes the hourly Mid-C price plus the cost of building a peaker, plus the cost of the imputed debt. The total revenue requirement (fixed and variable costs) of the non-renewable is the cost stream – including end effects – discounted back to the first year. That net present value is then levelized over the life of the comparison renewable resource.

Cost of Renewable Resource

Levelized cost of the renewable resource is more direct. It is based on the proforma financial analysis performed at the time of the acquisition. The stream of revenue requirement (all fixed and variable costs, including integration costs) are discounted back to the first year – again, including end effects. That net present value is then levelized out over the life of the resource/contract. The levelized cost of the renewable resource is then compared with the levelized cost of the equivalent non-renewable resource to calculate the incremental cost.

The following is a detailed example of how PSE calculated the incremental cost of Wild Horse. It is important to note that PSE's approach uses information contemporaneous with the decision making process, so this analysis will not reflect updated assumptions for capacity, capital cost, or integration costs, etc.

Eligible Renewable: Wild Horse Wind Facility

Capacity Contribution Assumption: $228.6 \times 17.2\% = 39 \text{ MW}$

1. Calculate Wild Horse Revenue Requirement

Figure G-37 is a sample of the annual revenue requirement calculations for the first few years of Wild Horse, along with the NPV of revenue requirement.

Figure G-37: Calculation of Wild Horse Revenue Requirement

(\$ Millions)	20-yr NPV	2007	2008	...	2025
Gross Plant		384	384	...	384
Accumulative depreciation (Avg.)		(10)	(29)	...	(355)
Accumulative deferred tax (EOP)		(20)	(56)	...	(7)
Rate base		354	299	...	22
After tax WACC		7.01%	7.01%	...	7.01%
After tax return		25	21	...	2
Grossed up return		38	32	...	2
PTC grossed up		(20)	(20)	...	-
Expenses		16	16	...	22
Book depreciation		19	19	...	19
Revenue required	370.9	53	48	...	44
End effects	4.6				
Total revenue requirement	375				

2. Calculate Revenue Requirement for Equivalent Non-renewable: Peaker Capacity

Capacity = 39 MW

Capital Cost of Capacity: \$462/KW

Figure G-38: Calculation of Peaker Revenue Requirement

(\$ Millions)	20-yr NPV	2007	2008	...	2025
Gross Plant		18	18	...	18
Accumulative depreciation (Avg.)		(0)	(1)	...	(10)
Accumulative deferred tax (EOP)		(0)	(0)	...	(3)
Rate base		18	17	...	5
After tax WACC		7.01%	7.01%	...	7.01%
After tax return		1	1	...	0
Grossed up return		2	2	...	0
Expenses		1	1	...	2
Book depreciation		1	1	...	1
Revenue required	32	4	4	...	3
End effects	2				
Total revenue requirement	34				

3. Calculate Revenue Requirement for Equivalent Non-renewable: Energy

Energy: 642,814 MWh

For the market purchase, we used the hourly power prices from the 2006 RFP plus a transmission adder of \$1.65/MWh in 2007 and escalated at 2.5 percent.

Figure G-39: Calculation of Energy Revenue Requirement

Month	Day	Hour	20-yr NPV	2007	...	2025
1	1	1		49 MW * \$59/MW = \$2891	...	49 MW * \$61/MW = \$2989
1	1	2		92 MW * \$60/MW = \$5520	...	92 MW * \$63/MW = \$5796
...	...	...		...	...	...
12	31	24		13 MW * \$59/MW = \$767	...	13 MW * \$65/MW = \$845
(\$Millions)						
Cost of Market				36	...	41
Imputed Debt				1	...	0
Total Revenue Requirement			285	37	...	41

4. Incremental Cost

The table below is the total cost of Wild Horse less the cost of the peaker and less the cost of the market purchases for the total 20-year incremental cost difference of the renewable to an equivalent non-renewable.

Figure G-40: 20-yr Incremental Cost of Wild Horse

(\$ Millions)	20-yr NPV
Wild Horse	375
Peaker	34
Market	285
20-yr Incremental Cost of Wild Horse	56

We chose to spread the incremental cost over 25 years since that is the depreciable life of a wind project used by PSE. The payment of \$56 Million over 25 years comes to \$5.2 Million per year using the 7.01 percent discount rate.

Summary Results

Each renewable resource that counts towards meeting the renewable energy target was compared to an equivalent non-renewable resource starting in the same year and levelized over the book life of the plant: 25 years for wind power and 40 years for hydroelectric power. Figure G-41 presents results of this analysis for existing resources and projected resources, including the 17 year SPI PPA. This demonstrates PSE expects to meet the physical targets under RCW 19.285 without being constrained by the cost cap. A negative cost difference means that the renewable was lower-cost than the equivalent non-renewable, while a positive cost means that the renewable was a higher cost.

*Figure G-41: Equivalent Non-renewable 20-year Levelized Cost Difference
Compared to 4% of 2019 GRC Revenue Requirement*

G Electric Analysis Models

As the chart reveals, even if the company's revenue requirement were to stay the same for the next 10 years, PSE would still not hit the 4 percent requirement. The estimated revenue requirement uses a 2.5 percent assumed escalation from the company's current revenue requirement.

480-109-210(2)(a)(i) Utility must make a one-time calculation of incremental cost for each eligible resource at the time of acquisition or, for historic acquisitions, the best information available at the time of acquisition

Formula **One Time Calculation** of Incremental Cost:

Energy-Levelized Incremental Cost:
[Levelized Cost Eligible Renewable Resource – Levelized Cost Alternative]

Capacity-Levelized Incremental Cost:
[Levelized Cost Eligible Renewable Resource – Levelized Cost Alternative]

Energy + Capacity = Incremental Cost

*Note:
Levelized cost of
eligible
renewable
resource should
include
integration*

Resource	ENERGY	\$	Energy	Capacity	Capacity	\$	\$
	Levelized Cost Eligible Renewable Resource (\$/REC/MWh)	Total Annual Cost (\$) (2)(a)(i)(A)	Levelized Cost Alternative (\$/MWh)	Levelized Cost Alternative (\$/kW-yr)	Total Alternative Cost (\$)	Incremental Cost (\$)	Washington Share
Baker River Project - Lower Baker Unit 3	\$ 78.54	\$ 8,600,000	\$ 7.92	\$ 120.01	\$ 9,290,000	\$ (690,000)	\$ (690,000)

						-	-
Total Renewable Resource Cost		\$ 256,640,000			\$ 213,470,000	\$ 43,170,000	\$ 43,170,000

Note 1: WAC 480-109-210 (2) (G): Legacy resources. Any eligible resource that the utility acquired prior to March 31, 1999, is deemed to have an incremental cost of zero.

Washington Share:	100.00%
ALL RESOURCES TOTAL INCREMENTAL COST = ENERGY + CAPACITY	\$ 43,170,000

2025 Estimated Data: Annual Calculation of Revenue Requirement Ratio

480-109-210(2)(a)(ii) Utility must annually calculate its revenue requirement ratio for 1) All Resources 2) Required Resources Target Year						
Formula Annual Calculation of Incremental Cost (Revenue Requirement Ratio):						
1) Total Incremental Cost All* Resources: {{sum of incremental costs of All* eligible resources + cost of unbundled RECs} - [revenue RECs]} / annual revenue requirement <i>*required because of excess generation, Avista needs to report 2 incremental costs</i>						
2) Total Incremental Cost Required Resources for Target Year: {{sum of incremental costs of Target Year* eligible resources used for target year compliance + cost of unbundled RECs} - [revenue RECs]} / annual revenue requirement						

Resource--Washington Only	ALL AVAILABLE RESOURCES ESTIMATED (RCW 19.285.070(1))			TARGET YEAR: FORECAST SUBJECT TO CHANGE (WAC 480-109-210(2)(a)(ii)(B) and (C))		
	sum of incremental costs of all eligible resources	RECs purchased	Revenue from REC sales	sum of incremental costs of all eligible resources	RECs purchased	Revenue from REC sales
Baker River Project - Lower Baker Unit 3	\$ (690,000)			\$ (606,690)

NOTES

Note 1: To calculate revenue requirements all costs/revenues are multiplied by the conversion factor to account for Washington's share Excise Tax, Uncollectibles and Commission Fees.

(iii)(A) & (B) Annual Reporting Summary Data: 2025

Utility must (A) report its total incremental cost as a dollar amount and in dollars per megawatt-hour of renewable energy generated by all eligible renewable resources in the calculation (a)(i) of this subsection; and (B) multiply the dollars per megawatt-hour cost calculated in (a)(iii)(A) of this subsection by the number of megawatt-hours needed for target year compliance.

Resource	(A)			(B)	
	Total Incremental Cost (as dollar \$ amt.)	MWh	Total Incremental Cost (\$/MWh)	Number of Megawatt- hours Needed for Target Year Compliance	Total Incremental Cost (\$/MWh) Multiplied by Number of Megawatt-hours Needed for Target Year Compliance

Energy Independence Act (I-937) Renewable Report Workbook

Last Updated: March 3, 2025

Submission: [Upload this workbook and all supporting documentation to Smartsheet.](https://app.smartsheet.com/b/form/655299f8f8d441e79cd9f002b935f073)
<https://app.smartsheet.com/b/form/655299f8f8d441e79cd9f002b935f073>

Deadline: June 1, 2025

Questions: Aaron Tam, State Energy Office, 206-454-2251, aaron.tam@commerce.wa.gov

Complete 2025 Report

This renewable energy report summarizes the eligible renewables resources and renewable energy credits (RECs) that the utility has acquired by January 1, 2025 for the purpose of meeting its Energy Independence Act (EIA) renewables target for 2025. The actual resources and RECs used to comply with the 2025 EIA target may vary from those reported here. Utilities will report in June of 2027 on the actual results for 2025.

Compliance Methods:

The EIA provides three compliance methods for qualifying utilities (a qualifying utility is an electric utility that serves more than 25,000 customers in the state of Washington):

1. Renewable Portfolio Standard (RPS) Target: meet the renewable energy target using any combination of renewable resources and RECs. The target for 2020 and each year thereafter is 15% of the utility's load. Utilities that become qualifying utilities after December 31, 2006, shall meet the requirements in this section on a time frame comparable in length to that provided for qualifying utilities as of December 7, 2006.
2. Resource Cost: invest at least 4% of the utility's annual revenue requirement in the incremental cost of renewable resources and RECs.
3. No Load Growth: invest at least 1% of its annual revenue requirement in renewable resources and RECs. This option is available only to certain utilities that are not growing.

All utilities must report the renewable resources and RECs acquired to comply with the EIA for the 2025 target year. Utilities that elect to use a compliance method based on renewable investments must provide additional information demonstrating compliance with that method. Refer to WAC 194-37-110(2) and (3) for specific requirements.

NOTE: This is a general explanation of the renewable energy requirements of the Energy Independence Act, intended to help members of the public understand the information reported by the utility. Consult Chapter 19.285 RCW and Chapter 194-37 WAC for details.

Revisions to 2023 Report

In addition to submitting the 2025 report, each qualifying utility should review the renewable energy report it submitted in 2023. In many cases, the specific resources and quantities actually used to comply with the 2023 target differ from what the utility reported in June 2023. Utilities should submit a revised 2023 report if the actual values differ from the values reported in 2023. Please use this template and change the "compliance year" cell to 2023. Please rename the file as "EIA Revised 2023 Renewable [Utility Name]."

Energy Indepence Act Statutes and Rules for Reference

RCW 19.285.070

Reporting and public disclosure.

(1) On or before June 1, 2012, and annually thereafter, each qualifying utility shall report to the department on its progress in the preceding year in meeting the targets established in RCW 19.285.040, including expected electricity savings from the biennial conservation target, expenditures on conservation, actual electricity savings results, the utility's annual load for the prior two years, the amount of megawatt-hours needed to meet the annual renewable energy target, the amount of megawatt-hours of each type of eligible renewable resource acquired, the type and amount of renewable energy credits acquired, and the percent of its total annual retail revenue requirement invested in the incremental cost of eligible renewable resources and the cost of renewable energy credits. For each year that a qualifying utility elects to demonstrate alternative compliance under RCW 19.285.040(2) (d) or (i) or 19.285.050(1), it must include in its annual report relevant data to demonstrate that it met the criteria in that section. A qualifying utility may submit its report to the department in conjunction with its annual obligations in chapter 19.29A RCW.

(2) A qualifying utility that is an investor-owned utility shall also report all information required in subsection (1) of this section to the commission, and all other qualifying utilities shall also make all information required in subsection (1) of this section available to the auditor.

(3) A qualifying utility shall also make reports required in this section available to its customers.

WAC 194-37-060

Conservation reporting requirements.

<Conservation targets and achievement are reported in a separate worksheet.>

WAC 194-37-110

Renewable resource energy reporting.

Each utility must submit a renewable resource energy report to the department by June 1st of each year using a form provided by the department. The report must reflect the actions that the utility took by the previous January 1st to meet the renewable requirements of chapter 19.285 RCW for that year. For example, a utility must report by June 1, 2015, the actions it took by January 1, 2015, to meet requirements applicable to the 2015 target year.

(1) **Reporting requirements applicable to all utilities.** Each utility must report the following information:

(a) The compliance method:

- (i) Renewable energy target using renewable resources and RECs – RCW 19.285.040 (2)(a);
- (ii) Incremental cost – RCW 19.285.050; or
- (iii) No-growth cost – RCW 19.285.040 (2)(d).

(b) The utility's load for the two years preceding the target year and the average load for those two years.

(c) The utility's renewable energy target for the target year.

(d) The amount of eligible renewable resources, RECs, and multiplier credits to be applied toward the utility's renewable energy target for the target year. The report must identify, by generating facility or hydroelectric project, including the WREGIS generating unit identification where applicable, and, in the case of RECs, by vintage year:

- (i) The eligible renewable resources in megawatt-hours to be applied toward the renewable energy target for the target year;
 - (ii) The RECs to be applied toward the renewable energy target for the target year;
 - (iii) Any additional credit for eligible renewable resources or RECs from generating facilities eligible for the apprentice labor provision in RCW 19.285.040 (2)(h), applied toward the renewable energy target for the target year;
 - (iv) Any additional credit for RECs from generating facilities eligible for the distributed generation in RCW 19.285.040 (2)(b), applied toward the renewable energy target for the target year.
- (e) The percent of its total annual retail revenue requirement invested in the incremental cost of eligible renewable resources and the cost of renewable energy credits. Each utility must include in its report documentation of the calculations and inputs to this amount.

(2) **Incremental cost compliance method report.** Each utility reporting pursuant to subsection (1)(a) of this section its use of the incremental cost compliance method for the target year must include the following information in its report:

- (a) Annual revenue requirement for the target year;
 - (b) The annual levelized delivered cost of its eligible renewable resource(s) reported separately for each resource;
 - (c) The annual levelized delivered cost of its substitute resources and the eligible renewable resource with which it is being compared;
 - (d) The total cost of renewable energy credits to be applied in the reporting year;
 - (e) The percentage of its annual revenue requirement invested in the incremental cost of eligible renewable resources and the cost of RECs; and
 - (f) The most current information required by WAC 194-37-160 used for this financial demonstration.
- (3) **No-growth cost compliance method report.** Each utility reporting pursuant to subsection (1)(a) of this section its use of the no-growth cost compliance method for the target year must include the following information in its report:

- (a) Annual revenue requirement for the target year;
- (b) Actual and weather-adjusted load for each year used in determining that the utility's load did not increase;
- (c) Delivered cost of its eligible renewable resource(s), RECs or a combination of both for the target year to be applied to the one percent of annual revenue requirement, reported separately for each resource;
- (d) Generating facility identification, vintage, quantity and cost of any RECs to be retired as an offset for nonrenewable resource purchases pursuant to RCW 19.285.040 (2)(d).

RE: Certification of Apprentice Labor Standard on Lower Snake River Wind Project - Phase 1

Dear Brian Doughty:

Thank you for submitting a request for certification of the apprentice labor standard on your project to the Washington State Apprenticeship and Training Council (Council). Department staff completed a review and we received confirmation that you indeed provided sufficient evidence to verify the claim of greater than 15 percent Washington approved apprentice labor hours utilized on the Lower Snake River Wind Project - Phase 1.

The Council voted unanimously on April 19, 2012 to approve the apprentice labor standard certification request for this project. Please accept this letter as confirmation that Puget Sound Energy achieved greater than 15 percent of the total labor hours performed by registered apprentices in programs approved by the Washington State Apprenticeship and Training Council on the Lower Snake River Wind Project - Phase 1. Thank you for supporting the use of registered apprentices in the renewable energy field.

Sincerely,

Lee Newgent, Chair
Washington State Apprenticeship and Training Council

RE: Apprentice Utilization on Wild Horse Wind Farm Expansion Project

Dear Mr. Williams:

Thank you for attending our recent Washington State Apprenticeship and Training Council (Council) meeting in Tumwater and the overview of the Wild Horse Wind Farm Expansion project. Department staff completed their review and I received confirmation that you have indeed provided sufficient evidence to verify your claim of greater than 15 percent Washington approved apprentice labor hours utilized during facility construction.

Please accept this letter as confirmation that Puget Sound Energy Company achieved greater than 15 percent of the total labor hours performed by registered apprentices in programs approved by the Council on the Wild Horse Wind Farm Expansion project.

Sincerely,

A handwritten signature in black ink, appearing to read "D-L D'Hondt", is written over a horizontal line.

Confirmation Letter #12

This Confirmation Letter describes a transaction between Buyer and Seller for the sale, purchase and Delivery of Renewable Energy Certificates (“**RECs**”) pursuant to and in accordance with the terms of the Renewable Energy Certificate Purchase and Sale Agreement between the Parties dated May 13, 2020 (the “**Agreement**”) and constitutes part of and is subject to the terms and provisions of the Agreement. Provided, that, to the extent there is a conflict between a provision of the Agreement and this Confirmation Letter, the terms of this Confirmation Letter shall control for the purposes of this transaction.

Initially capitalized terms used and not otherwise defined herein are defined in the Agreement.

Basic Commercial Terms:

Trade Date:	September 16, 2021
Transaction Reference:	19697
Seller:	
Buyer:	Puget Sound Energy, Inc.
Facility:	Seller's choice
Eligible Renewable Resource Type:	Seller's choice
Geography:	Seller's choice
Period Type [Generation, Reporting]:	Generation
Time Period:	January 01, 2024 - December 31, 2024
Product Quantity (REC):	3,100
Contract Price (\$/REC):	

Product Specific Terms:

Applicable Standard(s):	Wash. Rev. Code Sec. 19.285 et seq.; Wash. Admin. Code Sec 480-109
Environmental Attributes retained by Seller, if any:	None
Media Rights Conferred [yes, no]	No

Delivery Terms:

Delivery Date:	On or before April 15, 2025
Delivery Obligation [Firm, Unit Contingent, Project Contingent]:	Firm
Applicable Tracking System:	WREGIS
Buyer Tracking Account Name:	
Attestation Form:	None - Tracking System only
Buyer Delivery Contact [Name, Email]:	Tricia Fischer, tricia.fischer@pse.com
Seller Delivery Contact [Name, Email]:	

The Parties agree to the transaction set forth herein and each Party represents that the person signing this Confirmation Letter on its behalf is authorized to execute on behalf of the Party for whom they sign.

Puget Sound Energy, Inc.

Subject: RE: Today's Noon Meeting

Hi Linh,

In my initial review I notice that the vintage 2021 WH II apprenticeship credits are greater than 20%. We can't bifurcate the apprenticeship credit and REC.

I don't have access to the linked file so I'm not able to look at the underlying data but something you'll want to verify.
