Puget Sound Acoustic Analysis - Lmax in dB(C)

Early-warning siren testing at Baker River Hydroelectric Project

In an effort to ensure continued public safety and reliability, Puget Sound Energy will be testing its early-warning siren system at the Baker River Hydroelectric Project. The purpose of this test is to conduct siren and operational assessments as a follow up to the early-warning siren system that was installed in 2018.

What you can expect:

During the sound testing, the sirens will produce a tone and two verbal messages. This is a scheduled test and only a test of the siren system. When the sirens sound during this timeframe, residents are *not* called to evacuate.

When: June 15 between 8 a.m. to 4 p.m.

Where: The sirens to be tested are located in and around the town of Concrete, including Van Horn, Grassmere, Cape Horn, and Birdsvew

Who: PSE and contractor personnel

If you have any questions, please email damsafety@pse.com or call **1-888-404-8773**.
