

Integrated Resource Plan (IRP) Stakeholder Meeting Hot Sheet

Meeting Name: Integrated Resource Plan (IRP) Stakeholder Meeting on Delivery System Planning (DSP)
Meeting Date and Time: June 6th, 2022 from 9 a.m. to 12 p.m.

Agenda Topic	The Least You Should Know...
Delivery System Planning Ongoing Work	<ul style="list-style-type: none"> • The IRP and delivery system planning process can no longer occur independently with the proliferation of DER and need to deliver energy to customers reliably. • A modern grid supports clean energy by enabling DERs to integrate affordably and operate effectively to deliver reliable energy. • Modernization pace is driven by aggressive clean energy goal timelines, including PSE's CEIP. • A modern pipeline supports clean energy by enabling alternate fuels, reducing emissions from operations, and adding resiliency to the electric system.
Deliver System Planning – Integrating different voices	<ul style="list-style-type: none"> • Integrating stakeholder input and equity considerations into the delivery system planning process will improve PSE's delivery system investment plan, and PSE is developing a plan for engagement that leverages the CEIP equity processes and increases transparency to the process and the plan. • Hosting capacity map provides transparency to where customers can interconnect DERs to PSE's system more affordably and further map enhancements will benefit from stakeholder input. • The IRP DER forecast is developed by evaluating the delivery system electric transmission and substation needs which are integrated and valued in the IRP resource portfolio. • Integrating gas and electric resource considerations through evaluating the deferral value of electric infrastructure helps to understand the impact of electrification in IRP analysis.
Resource Interconnection Costs	<ul style="list-style-type: none"> • DER circuit enablement investments made as part of the CEIP will allow for increased DER adoption on the distribution system. • IRP interconnection costs and tie-line lengths for transmission connected resources have been updated based on RFP responses.
