PSE contracting with Osmose for power pole inspection work

Dear PSE Customer,

As part of Puget Sound Energy's pole inspection and maintenance program, crews from **Osmose** will continue power pole survey work across PSE's service area. The data from these pole inspections will help PSE perform its engineering functions, such as analyzing pole strength and electrical clearances from conductors. This work is needed to ensure continued electric system safety and service reliability.

Osmose crews are under contract with PSE and are authorized to perform on-the-ground pole inspection and treatment services. Additionally, drone technology is utilized for hard-to-reach cross country areas. All crews will carry photo identification and this letter of authorization. While in the field, they will drive service vehicles with their respective logos on the vehicle doors. For more information about Osmose, please visit **osmose.com**.

Energy service is essential, and it's necessary to continue field work to maintain the safety and reliability of our electric system. To learn more about PSE's pole inspection and maintenance program, please visit **PSE.com/PoleInspection**.

Thank you for your patience and understanding during this routine maintenance work. It's our goal to complete the work as quickly and safely as possible, while minimizing disruptions to you and your property. If you have any questions, please contact me at the information listed below.
