Puget Sound Energy invites you to an open house to learn about plans to upgrade the northern Redmond-Kirkland area electric system with the construction of a new 115 kilovolt transmission line from our Sammamish Substation in Redmond to or near our Juanita Substation in Kirkland (see map).

The new transmission line will help us increase system capacity to accommodate existing and growing demand for power so we can continue to provide reliable service to approximately 150,000 residential, commercial and industrial customers on the Eastside. We are working with an advisory group comprised of Kirkland and Redmond community members to select a preferred route for the project.

This is an early opportunity to provide comments on the project’s progress. We will host another community meeting in early 2012 to gather additional feedback on the project.

**Wednesday, Dec. 14, 2011**
5:30 – 7:30 p.m.

**Lake Washington Institute of Technology**
11605 132nd Ave NE, Kirkland
West Building, Room 401

**Refreshments and information provided**

Join us for an open house to:
- Learn about the challenges facing the local electric system
- Discuss PSE’s plans to address those challenges with a new 115 kV transmission line
- Learn how the advisory group is working with a routing model
- Provide input on the siting process and work to date
- Ask questions

To learn more about the project visit [www.PSE.com/SammJuan115](http://www.PSE.com/SammJuan115).

We welcome your comments and questions on our project at [info@sammjuan115.com](mailto:info@sammjuan115.com).
