

PSE selects preferred final route for new transmission line

Puget Sound Energy has selected a preferred final route for the Sammamish-Juanita 115 kV transmission line project (see map). The new 115 kilovolt transmission line will increase electric system capacity and reliability – decreasing the risk of power outages for you and your neighbors.

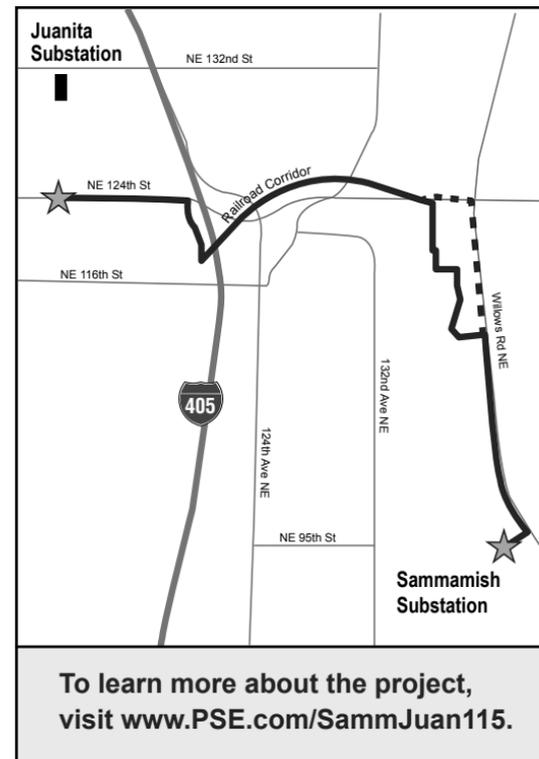

Over the past year, PSE has worked with a stakeholder advisory group and consulted with the broader community to develop a community-acceptable route for the new transmission line. Taking into consideration the advisory group's recommended preferred route and the community's response, PSE has adopted the advisory group's recommendation as the preferred final route.

Community feedback and the hard work of the advisory group helped us accomplish this milestone. Thank you for sharing your suggestions, comments and concerns about the project.

With a preferred final route identified, the project will now move into the design and permitting phase. PSE will be focusing on purchasing necessary easements, addressing property owner concerns, and obtaining permits, all of which may result in minor adjustments to the route.

PSE is committed to keeping the community informed of the project's progress. We welcome your comments and questions on our project at info@sammjuan115.com.
