

Electric system improvements planned for your community

Delivering your energy future

Puget Sound Energy is working to upgrade the electric system serving customers in northeastern King County. Plans to address customer electricity capacity constraints and provide additional electric reliability include the construction of a new 115 kilovolt transmission line.

The new line will run from the Sammamish substation (9221 Willows Road NE in Redmond) to or near the Juanita substation (10910 NE 132nd Street in Kirkland). The four-mile route of the transmission line has not yet been determined.

Building on past public feedback, PSE has formed a community stakeholder advisory group to provide input into the siting process. A community meeting will be scheduled this fall to solicit public comments and feedback on potential routes for the new line.

You will receive an invitation to the public meeting. In the meantime, if you have questions or comments about the Sammamish – Juanita 115 kV transmission line project, please send them to:

info@sammjuan115.com

or contact Barry Lombard or Jason Van Nort directly.
