

Midstream Water Heating program

Energize your business with PSE incentives* on water heaters and boilers.

The Puget Sound Energy (PSE) Water Heating program is our way of encouraging the use of energy-efficient equipment for your residential and commercial projects.

By participating in the program, you help protect the climate and reduce our customers' monthly energy bills. What's more, you can take advantage of our generous rebate program to offer your customers discounts on water heaters and boilers. In addition to saving you money, our program can help improve contractor sales and loyalty.

- ◆ All incentive claims must be submitted within 90 days of the equipment installation date.
- ◆ Equipment receiving a rebate through other utility programs may be eligible to also receive a discount through the PSE Midstream Water Heating program—please contact your account manager for more information.
- ◆ Pass-through residential and small commercial rebates are required to be passed along to the end-use customer and displayed as a line item or otherwise identified on the invoice.
