# Save thousands with commercial HVAC rebates

You can significantly lower your utility bill by upgrading your small business' heating, ventilation and cooling (HVAC) system to make it more energy efficient. PSE offers rebates to offset the cost of upgrades so you can generate long-term savings and invest more in your business.

## Commercial thermostats

**Reduce HVAC energy consumption by 10 - 15%** by switching to a commercial connected thermostat. You'll get total control over your building's HVAC system, allowing you to sync HVAC operation with occupancy and regulate your system from basically anywhere.

PSE's rebate covers the majority of the price for eligible thermostats.

## Ductless heat pumps for electric resistance conversion

**You can cut your heating bills in half** by upgrading your old electric resistance heater to a ductless heat pump. Plus, your customers and staff will enjoy air conditioning in the summer thanks to your new system.

PSE offers generous rebates for qualifying retrofits.

## Advanced rooftop controls

**Reduce HVAC energy consumption by 25 - 75%** by retrofitting your old rooftop unit with Advanced Rooftop Controls (ARC). ARCs also improve air quality, make temperatures more consistent and offer remote access.

PSE offers rebates up to 100% of the total cost for qualifying ARC units.
